Understanding 15 Increased Physical Damage in Path of Exile

The term "15 increased physical damage" in Path of Exile refers to a modifier that increases the physical damage dealt by the character's attacks or skills by 15%. This modifier can appear as a prefix or suffix on various items, including weapons, armor, and accessories. It is an essential stat for builds relying heavily on physical damage, such as melee characters wielding swords, axes, or claws, as well as some projectile-based builds. The increased physical damage modifier works multiplicatively with other damage bonuses, making it a valuable stat for maximizing damage output.

Importance of Physical Damage

Physical damage is a foundational damage type in Path of Exile. Many skills and attacks deal physical damage before being converted to other types or combined with elemental damage. Increasing physical damage directly boosts the baseline damage, which then benefits from further

multipliers. Because physical damage applies to a wide range of skills and weapon types, obtaining a solid 15 increased physical damage modifier is often a key target for players seeking to optimize their DPS (damage per second).

How 15 Increased Physical Damage Works

When an item or modifier grants 15 increased physical damage, it means the base physical damage is multiplied by 1.15. This increase affects weapon damage, melee hits, and some projectile skills. The modifier is additive with other increased physical damage sources but multiplicative with more global damage multipliers. Understanding this interaction helps players stack damage effectively.

Sources of 15 Increased Physical Damage

There are several avenues to obtain 15 increased physical damage in Path of Exile. Players can find this modifier on certain base items, through crafting, via vendor recipes, or by utilizing unique items. Knowing where to look for these sources and how to acquire them efficiently is crucial for building a strong character.

Base Items with 15 Increased Physical Damage

Certain base weapons and armor pieces naturally come with or can roll 15 increased physical damage as a mod. For example, specific high-level weapons like axes, swords, or maces may have this modifier as a possible roll on prefixes or suffixes. Players can farm high-level areas or trade to acquire these bases for further crafting.

Crafting Methods

Crafting is a reliable way to obtain 15 increased physical damage modifiers on gear. Using crafting bench options, fossils, or essences can yield increased physical damage rolls. Additionally, the crafting bench in the player's hideout offers enchantments and mods that can add increased physical damage to items.
