Understanding the Four Corners Game

The Four Corners game is an interactive group activity where participants choose one of four designated corners in a room based on their answer to a posed question. Each corner represents a different option, opinion, or category. Players move to the corner that best aligns with their response, creating a physical representation of group preferences or knowledge. This format encourages movement, dialogue, and critical thinking, making it popular in educational and social settings.

Mechanics of the Game

To play, a facilitator asks a question with four possible answers, each linked to a corner of the room. Participants consider their answer and move to the corresponding corner. After everyone settles, the facilitator can prompt discussion or voting, or simply move on to the next question. This process repeats, allowing participants to express their views and learn about others' perspectives in a lively, engaging manner.
