Locations of Fuse Boxes in the 2006 Ford 500

The 2006 Ford 500 features two primary fuse boxes: the interior fuse panel and the engine compartment fuse box. Each box houses fuses and relays dedicated to specific vehicle functions.

Interior Fuse Panel

The interior fuse panel is typically located under the dashboard on the driver's side. It contains fuses related to interior electrical components such as the interior lights, power windows, audio system, and climate control. Accessing this panel usually involves removing a protective cover to reveal the fuses and relays.

Engine Compartment Fuse Box

The engine compartment fuse box is found near the battery or along the fender wall inside the engine bay. This fuse box manages high-current circuits such as the fuel pump, ignition system, cooling fans, and other engine-related electronics. It is built to withstand higher temperatures and environmental exposure compared to the interior panel.
