Conditions Treated by Pelvic Floor Physical Therapy

Beaumont pelvic floor physical therapy addresses a diverse array of pelvic health issues affecting both men and women. The therapy is designed to improve strength, flexibility, and coordination of the pelvic floor muscles, which play a critical role in urinary, bowel, and sexual function.

Urinary Incontinence

Urinary incontinence, including stress, urge, and mixed types, is a primary condition treated by pelvic floor physical therapy. Weak or dysfunctional pelvic muscles can lead to involuntary leakage of urine. Treatment focuses on strengthening these muscles to improve bladder control and reduce episodes of incontinence.

Pelvic Pain and Dysfunction

Chronic pelvic pain, interstitial cystitis, and pelvic floor tension myalgia are conditions effectively managed with Beaumont pelvic floor physical therapy. Therapists employ manual techniques and relaxation exercises to alleviate muscle spasms and reduce pain.

Pelvic Organ Prolapse

Pelvic organ prolapse occurs when one or more pelvic organs descend due to weakened support structures. Physical therapy aims to strengthen the pelvic floor, potentially reducing the severity of prolapse symptoms and improving quality of life.

Postpartum Recovery

After childbirth, many women experience pelvic floor weakness or dysfunction. Beaumont pelvic floor physical therapy provides specialized postpartum programs that focus on restoring muscle tone, improving core strength, and addressing any pain or incontinence issues arising from delivery.

Treatment Techniques and Approaches

Beaumont pelvic floor physical therapy incorporates a variety of evidence-based treatment modalities tailored to individual patient assessments. These techniques work synergistically to restore pelvic floor function and alleviate symptoms.

Manual Therapy

Manual therapy involves hands-on techniques to stretch, mobilize, and release tight or painful pelvic floor muscles. This approach helps reduce muscle tension, improve circulation, and enhance tissue flexibility.

Biofeedback Therapy

Biofeedback is a crucial modality used in Beaumont pelvic floor physical therapy. It provides real-time feedback to patients about their pelvic muscle activity, enabling improved muscle control and coordination through visual or auditory cues.

Therapeutic Exercises

Customized exercise programs are developed to strengthen weak pelvic floor muscles and improve endurance. These may include Kegel exercises, core stabilization routines, and functional movement training designed to support pelvic health.

Education and Lifestyle Modifications

Patient education is integral to therapy success. Therapists provide guidance on proper posture, bladder habits, and lifestyle changes that support pelvic floor health. Techniques for managing symptoms and preventing recurrence are also emphasized.
