Care and Maintenance Tips

Proper care and maintenance of Bic mechanical pencils ensure optimal performance and extend their lifespan. Simple practices such as refilling leads correctly and avoiding excessive pressure during writing can prevent damage.

Refilling Leads

To refill the leads, remove the eraser cap and insert new leads carefully into the barrel. Using the correct lead size (usually 0.7mm) prevents jamming and ensures smooth advancement. It is recommended to refill before the pencil runs completely out of lead to avoid misalignment.

Cleaning and Storage

Regularly cleaning the pencil tip and mechanism helps maintain smooth operation. Store the pencils in a dry, cool place to prevent damage to the plastic barrel and lead. Avoid dropping the pencils, as this can misalign the internal components.

- Use only compatible lead refills to prevent damage.
- Avoid pressing too hard to reduce lead breakage.
- Replace erasers as soon as they wear down for clean corrections.
- Keep pencils capped or in a container to protect the tips.
