Additionally, the manual instructs users to disengage the safety only when ready to shoot and to re-engage it immediately after firing or when handling the rifle.

Operating Instructions

Pumping and Firing Procedure

The Pumpmaster requires manual pumping to build air pressure before firing. The manual details the following process:

1. Ensure the air rifle is pointed in a safe direction and the safety is engaged.
2. Grasp the pump lever firmly and pull it fully down and then back up to the starting position.
3. Repeat the pumping action up to a maximum of 10 times, depending on desired velocity.

4. Aim using the adjustable rear and fixed front sights.
5. Disengage the safety and gently squeeze the trigger to fire.

The manual advises users to avoid over-pumping beyond 10 pumps to prevent mechanical damage.
