Deep Cleaning and Descaling

The self-cleaning cycle uses a mixture of water and vinegar to remove mineral buildup inside the machine. The manual recommends running this cycle every 1-3 months depending on water hardness. Follow these steps for descaling:

1. Fill the water reservoir with a mixture of equal parts white vinegar and water.
2. Start the brew cycle without adding coffee grounds.
3. Halfway through, pause the machine and let it sit for 30 minutes.
