Types of Culture Index Survey Questions

Quantitative vs. Qualitative Questions

Quantitative questions often use rating scales or multiple-choice formats to measure specific cultural attributes numerically. They allow for easy aggregation and statistical analysis. Examples include Likert scale questions assessing agreement or satisfaction levels.

Qualitative questions provide open-ended opportunities for employees to express their thoughts and feelings in their own words. These responses offer rich, detailed information that helps interpret quantitative findings and provides context.

Behavioral and Attitudinal Questions

Behavioral questions focus on observable actions and practices within the workplace, such as collaboration frequency or adherence to company policies. Attitudinal questions probe deeper into employees' perceptions, beliefs, and feelings about the organizational culture.

Sample Question Formats

- **Likert Scale:** "On a scale of 1 to 5, how strongly do you agree with the statement: 'I feel valued at work'?"
- **Multiple Choice:** "Which of the following best describes your team's communication style?"
- **Open-Ended:** "What improvements would you suggest to enhance our workplace culture?"
