Certification and Renewal Requirements

Understanding certification and renewal criteria is crucial for sterile processing technicians aiming to maintain their credentials. Certification bodies outline specific CEU requirements that must be fulfilled within designated periods, often every two years. Free CEUs that align with these standards provide a cost-effective way to meet these obligations.

Certified Registered Central Service Technician (CRCST)

The CRCST credential, administered by IAHCSCMM, requires certified individuals to earn a minimum of 12 CEUs every two years to renew their certification. At least 50% of these must be related to sterile processing topics, with the remainder allowed from related healthcare subjects.

Certified Instrument Specialist (CIS)

For technicians specializing in surgical instruments, the CIS certification also mandates ongoing education. Completing free CEUs relevant to instrument care and handling can fulfill part of these renewal requirements, ensuring continued expertise and certification validity.

How to Choose the Right Free CEU Courses

Selecting the most appropriate free CEU courses involves considering factors such as course content relevance, accreditation, and ease of access. Prioritizing courses that directly relate to sterile processing tasks enhances practical knowledge and certification compliance.

Accreditation and Approval

Choose free CEU courses that are accredited or recognized by relevant certification organizations. This ensures that the credits earned will count towards renewing credentials such as CRCST or CIS. Verification of course approval status is usually available on the course provider's website or through the certification body.

Course Content and Format

Evaluate whether the course covers topics pertinent to daily sterile processing tasks, such as sterilization methods, infection control, and equipment maintenance. Additionally, consider formats that suit individual learning preferences, including video lectures, interactive quizzes, and printable materials.
