Course Layout and Flow

Constructing the Course Base

The base construction typically involves leveling the ground and installing a stable foundation such as compacted gravel or concrete. This base supports the turf or playing surface and ensures durability. Free guides provide instructions on the appropriate base materials and installation techniques tailored to various climates and soil conditions.

Installing Obstacles and Features

Follow plan specifications to build and place obstacles, ensuring they are securely anchored and safe for players. Use materials recommended in the guides, such as treated wood, PVC, or molded plastics. Attention to detail during this phase affects both the functionality and visual impact of the course.
