Types of Reading Level Assessments

There are multiple types of reading level assessments available, each designed to measure specific aspects of reading proficiency. Selecting the right type depends on the goals of the evaluation and the age or grade level of the student.

Informal Reading Inventories (IRIs)

IRIs are comprehensive assessments that involve reading passages aloud followed by comprehension questions. They help determine independent, instructional, and frustration reading levels, providing detailed insight into a student's capabilities.

Running Records

Running records are observational tools used during oral reading to note errors, self-corrections, and fluency. They offer immediate feedback on a

child's reading behavior and are often used by teachers in classroom settings.

Multiple Choice and Cloze Tests

These assessments focus primarily on comprehension by using multiple-choice questions or cloze passages where words are omitted for students to fill in. They are straightforward to administer and score, making them practical for printable formats.
