Key Components of the Frigidaire Affinity Dryer

The Frigidaire Affinity dryer contains multiple parts working together to ensure efficient drying performance. The parts diagram highlights each essential component, enabling users to recognize and understand their functions.

Drum and Drum Assembly

The drum is the rotating cylinder where clothes are placed for drying. It is supported by rollers and seals to ensure smooth operation and prevent heat loss. The drum assembly also includes the belt that drives rotation and the idler pulley that maintains belt tension.

Heating Element

The heating element generates the heat necessary for drying clothes. It is controlled by thermostats and thermal fuses to maintain safe operating temperatures. The parts diagram shows the heating element's location relative to the blower and drum.

Blower and Motor

The blower circulates hot air through the drum and vents moisture outside. It is driven by the motor, which also powers the drum belt. Both the blower and motor are critical for dryer functionality and are clearly labeled in the parts diagram for easy identification.

Control Panel and Timer

The control panel contains the user interface, including buttons, knobs, and display screens. The timer coordinates drying cycles and controls power distribution. The diagram illustrates how these controls connect to the internal wiring and components.

Door Assembly and Lint Filter

The door assembly includes the outer door, latch, and hinges, ensuring safe operation and heat retention. The lint filter traps lint and debris from clothes, preventing blockages in the vent system. Their positions and part numbers are detailed in the parts diagram for maintenance purposes.
