Key Components of a Frigidaire Front Load Washer

Knowing the main parts of a Frigidaire front load washer is fundamental to interpreting the parts diagram. The washer consists of several critical components that work together to ensure optimal washing performance. Each part has a specific function and contributes to the machine's overall operation.

Drum and Tub Assembly

The drum is the rotating part where clothes are placed for washing. It is enclosed within the tub, which holds water during cycles. The drum's rotation is powered by the motor and transmission system.

Motor and Drive System

The motor provides the necessary power to rotate the drum. It works in conjunction with belts or direct drive mechanisms to facilitate movement during washing and spinning cycles.

Water Pump and Drainage

The water pump is responsible for draining water from the tub after washing or rinsing. It ensures efficient removal of dirty water to maintain cleanliness and proper cycle progression.

Control Panel and Electronic Components

The control panel houses the buttons, knobs, and display that allow users to select washing cycles and settings. It includes the electronic control board, which manages the machine's functions and timing.

Door and Seal Assembly

The front load washer's door includes a glass window and a rubber gasket seal to prevent leaks. Proper sealing is critical for safety and preventing water damage during operation.

Additional Parts

- Detergent Dispenser
