- Vendor's Role and Market Position
- Key Features and Offerings of Business Objects
- Integration and Compatibility

Identifying the Vendor of Business Objects

The question of **from which vendor is the bi product business objects available** leads directly to SAP SE. Business Objects, originally an independent software company, was acquired by SAP in 2007. Since then, SAP has been the sole vendor responsible for the development, distribution, and support of the Business Objects suite. SAP is a global leader in enterprise software, and their acquisition of Business Objects strengthened their position in the business intelligence market. The vendor's commitment to continuous innovation ensures that Business Objects remains a competitive and robust BI solution for enterprises worldwide.

History of Business Objects and Acquisition by SAP

Business Objects was founded in 1990 and quickly grew as a pioneer in business intelligence and analytics

software. The company specialized in user-friendly reporting and analytics tools that empowered business users to gain insights from their data without deep technical knowledge. In 2007, SAP acquired Business Objects for approximately \$6.8 billion, integrating its BI capabilities with SAP's extensive enterprise software portfolio. This acquisition marked a significant milestone, positioning SAP as a leader in both ERP and BI software markets. Since then, SAP has expanded and enhanced Business Objects to align with modern data analytics demands.

Overview of Business Objects as a BI Product

Business Objects, under the stewardship of SAP, offers a comprehensive suite of business intelligence tools designed to help organizations make informed decisions. The suite includes various components for reporting, data visualization, and analytics. These tools enable users to access, analyze, and share critical business data efficiently. Business Objects targets a wide range of industries, supporting complex enterprise environments with scalable and customizable solutions. Its user-friendly interfaces and powerful backend processing make it a preferred choice for businesses aiming to leverage their data assets.

Components of the Business Objects Suite

The Business Objects product line includes several key components, each serving specific BI functions:

- **Web Intelligence (WebI):** Enables ad hoc reporting and analysis through a web interface.
- **Crystal Reports:** Offers detailed and pixel-perfect report generation capabilities.
- **Dashboard Designer:** Provides interactive dashboards for visualizing KPIs and metrics.
- **Data Services:** Supports data integration, cleansing, and transformation.
- **Explorer:** Facilitates intuitive data exploration and discovery.

Vendor's Role and Market Position

SAP, as the vendor of Business Objects, plays a critical role in the BI industry. The company continually invests in product development, ensuring Business Objects stays current with evolving technology trends such as cloud computing, big data, and AI-driven analytics. SAP's market presence enables it to provide extensive support, training, and consulting services to Business Objects customers. Additionally, SAP's global footprint ensures accessibility to a broad range of industries and geographies. The vendor's strategy emphasizes integrating Business Objects with other SAP products, enhancing overall enterprise data

management and analytics capabilities.

Support and Services Provided by SAP

As the vendor, SAP offers comprehensive support and professional services for Business Objects users, including:

- Technical support and troubleshooting
- Product updates and patches
- Training programs and certification courses
- Consulting services for implementation and customization
- Cloud migration assistance and hybrid deployment options

Key Features and Offerings of Business Objects

The Business Objects BI product offers a range of features that cater to diverse organizational needs. These features are designed to enhance data accessibility, improve reporting accuracy, and facilitate real-time decision-making. The vendor's continuous improvements have introduced advanced analytics capabilities, mobile BI, and enhanced data governance frameworks. Business Objects supports multiple data sources and formats, enabling seamless integration into existing IT environments.

Core Features Enhancing Business Intelligence

Important features of Business Objects include:

- **Self-Service BI:** Allows users to create reports and dashboards without IT intervention.
- **Data Connectivity:** Supports connectivity to various databases, cloud services, and ERP systems.
- **Collaboration Tools:** Enables sharing and commenting on reports within teams.
- **Scalability:** Suitable for small businesses to large enterprises with extensive data volumes.
- **Security and Compliance:** Ensures data protection through role-based access and audit trails.

Integration and Compatibility

Understanding **from which vendor is the BI product Business Objects available** also involves recognizing the product's integration capabilities. SAP ensures that Business Objects is compatible with a wide array of enterprise applications, both within and beyond the SAP ecosystem. This interoperability is vital for organizations seeking to unify their data analytics landscape. Business Objects can integrate with SAP ERP, SAP HANA, third-party databases, and cloud platforms, providing a cohesive BI environment.

Integration Options and Supported Platforms

Business Objects supports integration with numerous platforms and technologies, including:

- SAP HANA for in-memory data processing and real-time analytics
- Cloud platforms such as SAP Analytics Cloud and other cloud-based BI solutions
- Various relational databases including Oracle, SQL Server, and IBM DB2
- Non-SAP applications through standard data connectors and APIs
- Big data platforms and Hadoop ecosystems
