Overview of the IB Physics Formula Booklet

The IB Physics formula booklet is a standardized document provided to students during the IB Physics examinations. It consolidates all necessary mathematical relationships, constants, and physical laws required to solve exam questions. The booklet is designed to assist students in focusing on problem-solving skills rather than recalling every formula from memory. It typically includes formulas from both Standard Level (SL) and Higher Level (HL) syllabi, ensuring coverage of the entire curriculum.

The formula booklet is divided into various thematic sections, each corresponding to topics covered in the IB Physics course. These sections help students quickly find relevant formulas related to motion, forces, energy, waves, electricity, magnetism, and quantum physics. The booklet's clarity and organization are crucial for quick referencing during timed exams.

Core Sections and Key Formulas

The formula booklet organizes formulas into core sections aligned with the IB Physics syllabus. Each section contains fundamental equations and relationships essential for understanding and solving problems within that topic area. Below is an exploration of the main sections and some representative formulas.

Mechanics

The mechanics section includes formulas related to kinematics, dynamics, circular motion, and momentum. Key formulas involve equations of motion, Newton's laws, and conservation principles.

- Equations of motion: $(v = u + at)$, $(s = ut + \frac{1}{2}at^2)$, $(v^2 = u^2 + 2as)$
- Force and acceleration: $(F = ma)$
- Momentum: $(p = mv)$, and impulse-momentum theorem $(Ft = \Delta p)$
- Work and energy: $(W = Fd \cos \theta)$, $(KE = \frac{1}{2}mv^2)$, $(PE = mgh)$

Thermal Physics

This section covers formulas related to heat, temperature changes, and the behavior of gases. Important formulas include those for specific heat capacity, latent heat, and the ideal gas law.

- Heat transfer: $(Q = mc\Delta T)$
- Latent heat: $(Q = mL)$
- Ideal gas law: $(PV = nRT)$

Waves and Oscillations

Formulas related to wave properties, oscillation periods, and wave behavior are included here. This section aids in solving problems involving sound, light, and mechanical waves.

- Wave speed: $(v = f\lambda)$
- Period of a pendulum: $(T = 2\pi \sqrt{\frac{l}{g}})$
- Frequency and wavelength relationships

Electricity and Magnetism

Key formulas in this section relate to electric circuits, fields, forces, and magnetic effects. Students find equations for Ohm's law, electric field strength, capacitance, and magnetic force.

- Ohm's law: $(V = IR)$

- Electric field: $E = \frac{F}{q}$
- Capacitance: $C = \frac{Q}{V}$
- Magnetic force: $F = BIl \sin \theta$

Modern Physics

The modern physics section covers quantum phenomena, atomic models, and nuclear physics. This includes formulas for photon energy, radioactive decay, and electron transitions.

- Photon energy: $E = hf$
- Radioactive decay: $N = N_0 e^{-\lambda t}$
- Mass-energy equivalence: $E = mc^2$
