Enabling Cheats in The Sims 4

Before using the increase skills cheat Sims 4 commands, it is crucial to enable the cheat console in the game. Cheats are disabled by default to maintain gameplay balance, but enabling them is straightforward. Activating the cheat console allows players to input various commands, including those that increase skill levels instantly. This section explains the step-by-step process to enable cheats and prepare the game for skill modification commands.

How to Open the Cheat Console

The cheat console is the interface where players enter cheat commands. On Windows and Mac, the cheat console is opened using a specific keyboard shortcut. Opening this console is the first step to using any cheat codes, including those that increase skills.

Activating Cheats with Commands

After opening the cheat console, players must activate cheats to ensure their commands take effect. This is done by entering a universal cheat activation command that unlocks all

cheat functionalities. Without activating cheats, skill increase commands will not work.

Steps to Enable Cheats

- Press *Ctrl + Shift + C* on Windows or *Command + Shift + C* on Mac to open the cheat console.
- Type **testingcheats true** or **testingcheats on** and press Enter.
- Cheats are now enabled, and the player can enter skill increase commands.

Basic Increase Skills Cheat Commands

Once cheats are enabled, players can use basic commands to increase skills in The Sims 4. The general format involves typing a command that targets the Sim's skill and the desired skill level. This section outlines the fundamental cheat syntax and how to use it effectively to boost any skill.

General Cheat Code Syntax

The most common cheat command structure for increasing skills is:

stats.set_skill_level skill_X

Here, *skill_* corresponds to the specific skill, and *X* is the skill level to set, ranging from 1 to 10. This command instantly sets the chosen skill to the specified level.

Example of Basic Skill Increase

For example, to increase the Cooking skill to level 10, the command would be:

stats.set_skill_level skill_cooking 10

Executing this command elevates the Sim's cooking skill to the maximum level immediately.

Incremental Skill Increases

Players can also increment skill levels by adding to the current level instead of setting it directly. The command for adding skill points is:

stats.increment_skill skill_X

This increases the skill by *X* levels rather than setting a fixed level.
