- Quadratic Formula: $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$
- Difference of Squares: $a^2 - b^2 = (a - b)(a + b)$
- Exponent Rules: $a^m \times a^n = a^{(m+n)}$, $(a^m)^n = a^{(mn)}$
- Sum and Difference of Cubes

Geometry and Measurement

The geometry section covers formulas related to shapes, angles, area, volume, and coordinate geometry. Important formulas include:

- Area and Perimeter of polygons
- Volume formulas for prisms, cylinders, cones, spheres

- Pythagorean theorem: $a^2 + b^2 = c^2$
- Distance and midpoint formulas on the coordinate plane

Trigonometry

The trigonometry portion includes basic trigonometric ratios and identities frequently used in problems involving right triangles and circular functions. Included are:

- Sine, cosine, and tangent ratios
- Law of Sines and Law of Cosines
