Site Preparation

Selecting an appropriate location for the washer is the first step in installation. The site should have:

Connecting Water Supply and Drain Hose

Connecting the washer to water and drainage systems involves the following:

damage fittings.

3. Position the drain hose into the standpipe or laundry tub as per the manual's specifications, securing it to prevent movement during operation.

Electrical Requirements

The Maytag Bravos washer requires a dedicated grounded electrical outlet. The instruction manual specifies the need for a 120V, 60Hz power supply with proper grounding to ensure user safety and proper machine function. Extension cords or adapters should not be used.

Cleaning the Washer Tub and Dispenser

Periodic cleaning of the wash tub and detergent dispenser is recommended. The manual suggests running a cleaning cycle using a washer cleaner product or a mixture of bleach and water. Dispensers should be removed and rinsed to remove detergent buildup.

Checking and Cleaning the Lint Filter

The Maytag Bravos washer is equipped with a lint filter that traps debris during washing. Cleaning the lint filter regularly helps maintain wash quality and prevents drainage issues. The manual provides instructions on locating, removing, and cleaning the filter.

The washer may display error codes indicating specific malfunctions. The manual provides a list of these codes, their meanings, and suggested corrective actions. For example, an error code related to water supply issues prompts checking hose connections and water pressure.

Addressing Noisy Operation

Noises during the wash cycle can indicate unbalanced loads, foreign objects in the tub, or worn parts. The manual advises redistributing laundry evenly, removing items such as coins or buttons, and contacting service for persistent noises.
