Proper Usage and Handling Guidelines

To ensure the quality and safety of stored breast milk, it is essential to follow proper usage and handling practices with the Medela breast milk storage solution set.

Filling and Sealing Storage Bags

When using storage bags, fill them with the desired amount of milk without overfilling to allow expansion during freezing. Remove excess air before sealing the bag securely using the double zipper seal. Proper sealing prevents leaks and contamination.

Using Storage Bottles

Fill storage bottles up to the indicated maximum level to avoid spillage during freezing. Secure the lid tightly to maintain freshness. Bottles are ideal for milk that will be fed directly from the container or used within a shorter timeframe.

Labeling Milk Containers

Always label storage bags and bottles with the date of milk expression and volume. This practice helps in tracking milk freshness and ensures the oldest milk is used first, adhering to the First-In-First-Out (FIFO) principle.

Thawing and Warming Milk

Thaw frozen milk slowly in the refrigerator overnight or by placing the container in a bowl of warm water. Avoid microwaving or direct heat to prevent nutrient degradation and uneven warming.

Cleaning and Sterilization Procedures

Maintaining cleanliness of the Medela breast milk storage solution set components is critical to prevent contamination and protect infant health.

Cleaning Reusable Bottles and Lids

Wash bottles, lids, and caps thoroughly with warm, soapy water immediately after use. Use a bottle brush to clean hard-to-reach areas. Rinse well to remove all soap residues.

Sterilizing Components

Regular sterilization of reusable parts is recommended, especially for infants under three months or those with weakened immune systems. Use boiling water, steam sterilizers, or sterilizing solutions following manufacturer guidelines.

Handling Storage Bags

Storage bags are designed for single use only and should be discarded after thawing or feeding. Avoid refilling or reusing bags to maintain hygiene standards.

Storage Duration and Safety Tips

Proper storage duration and conditions are vital to preserve the nutritional quality and safety of expressed breast milk when using the Medela breast milk storage solution set.

Recommended Storage Times

Breast milk storage times vary depending on the storage method:

- Room temperature (up to 77°F / 25°C): up to 4 hours

- Refrigerator (at 39°F / 4°C): up to 4 days
- Freezer (at 0°F / -18°C or lower): up to 6 months is best; up to 12 months acceptable

Safe Thawing Practices

Thaw frozen breast milk in the refrigerator or by warming in a water bath. Once thawed, use milk within 24 hours and do not refreeze. Avoid using a microwave to prevent hotspots and nutrient loss.

Handling Tips to Maintain Milk Quality

Use clean hands when handling storage bags and bottles. Avoid shaking milk vigorously; instead, gently swirl to mix. Always discard any leftover milk from feeding to prevent bacterial growth.
