What are common responsibilities of a medication technician?

A medication technician is responsible for preparing and administering medications to patients, documenting medication administration, monitoring patients for side effects, and ensuring compliance with medication orders and safety protocols.

How do you ensure accuracy when administering medication?

To ensure accuracy, I double-check the medication label against the patient's prescription, verify the correct dosage and route, confirm the patient's identity, and follow the 'five rights' of medication administration: right patient, right medication, right dose, right route, and right time.

What steps do you take if you notice a medication error?

If I notice a medication error, I immediately report it to the supervising nurse or healthcare provider, monitor the patient for any adverse effects, document the incident accurately, and follow facility protocols to prevent future errors.

How do you handle a situation where a patient refuses their medication?

I would first try to understand the patient's concerns and provide clear information about the importance of the medication. If the patient still refuses, I would document the refusal and inform the supervising nurse to determine the appropriate next steps.

What experience do you have with electronic medication administration records (eMAR)?

I stay updated by regularly attending training sessions, reviewing facility policies, subscribing to professional healthcare updates, and participating in continuing education related to medication administration and safety.

Describe a time when you had to handle a difficult situation during medication administration.
