Overview of Poquito Más Menu and Ingredients

Understanding Poquito Más nutrition information begins with a look at the restaurant's menu and common ingredients. Poquito Más offers a variety of Mexican-inspired dishes including burritos, tacos, bowls, and salads. The core ingredients typically include seasoned meats such as grilled chicken, steak, or pork, along with rice, beans, fresh vegetables, and various sauces. Many menu items also feature cheese, sour cream, and guacamole, which contribute to both flavor and nutritional content.

The focus on fresh vegetables such as lettuce, tomatoes, onions, and cilantro provides fiber and essential nutrients, while the beans and rice serve as carbohydrate sources. The meats supply protein and fats, varying depending on preparation methods. Additionally, the inclusion of salsas and spices adds antioxidants and flavor without significant calories. Understanding these components lays the foundation for analyzing the detailed nutrition facts of Poquito Más meals.

Caloric Content and Macronutrient Breakdown

Poquito Más nutrition information prominently features the caloric and macronutrient content of its menu items. Calories represent the energy provided by food and are derived from three main macronutrients: carbohydrates, proteins, and fats. Each of these macronutrients plays a crucial role in

bodily functions and energy metabolism.

Calories in Typical Poquito Más Dishes

The calorie range for Poquito Más meals varies widely based on portion size and ingredient choices. For example, a standard burrito with rice, beans, chicken, cheese, and sour cream can range from approximately 600 to 900 calories. Smaller options like tacos generally contain between 150 and 300 calories per piece. Bowls and salads often offer more customizable calorie counts depending on toppings and dressings.

Macronutrient Distribution

On average, a Poquito Más entrée delivers the following macronutrient distribution:

- **Carbohydrates:** 40–50% of total calories, primarily from rice, beans, and vegetables.
- **Proteins:** 25–35%, sourced mainly from meats and beans.
- **Fats:** 20–30%, derived from cheese, sour cream, guacamole, and cooking oils.

This balance supports a moderate energy supply suitable for many dietary needs, though adjustments can optimize it for specific goals such as low-carb or high-protein diets.
