Overview of Swedish Sleep Medicine Issaquah

Swedish Sleep Medicine Issaquah is a dedicated sleep center located in Issaquah, Washington, operating under the broader Swedish Health Services umbrella. The center focuses on comprehensive sleep care, combining clinical expertise with advanced technology to provide accurate diagnoses and effective treatment plans. Their multidisciplinary team includes board-certified sleep specialists, pulmonologists, neurologists, and respiratory therapists, ensuring a holistic approach to sleep health. The facility is equipped with modern sleep laboratories that allow for overnight monitoring and in-depth analysis of sleep patterns and disturbances.

Mission and Vision

The mission of Swedish Sleep Medicine Issaquah is to improve patients' quality of life by addressing sleep-related issues through compassionate care, education, and cutting-edge research. Their vision emphasizes becoming a regional leader in sleep medicine by continuously advancing clinical

practices and patient outcomes.

Location and Accessibility

Conveniently situated in Issaquah, the center offers easy access for residents of King County and surrounding areas. The facility provides ample parking and is accessible via public transportation, making it a practical choice for individuals seeking specialized sleep care.

Common Sleep Disorders Treated

Swedish Sleep Medicine Issaquah treats a wide range of sleep disorders, recognizing that untreated sleep problems can lead to significant health complications. The center's expertise covers both common and complex conditions that affect sleep quality and daytime functioning.

Obstructive Sleep Apnea (OSA)

One of the most frequently diagnosed conditions at the center is obstructive sleep apnea, characterized by repeated interruptions in breathing during sleep due to airway obstruction. Symptoms often include loud snoring, gasping, and excessive daytime sleepiness. OSA is linked to cardiovascular disease, hypertension, and metabolic disorders if left untreated.

Insomnia

Insomnia, defined by difficulty falling or staying asleep, is another prevalent disorder managed by the center. It can be caused by stress, medical conditions, or poor sleep hygiene. Swedish Sleep Medicine Issaquah employs behavioral and pharmacological strategies to help patients regain restful sleep.

Restless Leg Syndrome (RLS) and Periodic Limb Movement Disorder (PLMD)

The center also addresses neurological sleep disorders such as restless leg syndrome and periodic limb movement disorder, which cause uncomfortable sensations and involuntary limb movements during sleep, interfering with restorative rest.

Other Disorders

Additional conditions treated include narcolepsy, circadian rhythm sleep-wake disorders, and parasomnias such as sleepwalking and night terrors. The comprehensive scope ensures tailored care for diverse sleep issues.

Diagnostic Services and Procedures

Accurate diagnosis is critical for effective treatment of sleep disorders. Swedish Sleep Medicine Issaquah utilizes a variety of diagnostic tools and procedures to assess patients thoroughly and determine the root causes of sleep disturbances.

Polysomnography (Sleep Study)

The center's signature diagnostic service is polysomnography, an overnight sleep study that records brain activity, eye movements, muscle activity, heart rhythm, breathing patterns, and oxygen levels. This comprehensive test helps identify conditions such as sleep apnea, periodic limb movements, and other sleep-related abnormalities.

Home Sleep Apnea Testing (HSAT)

For some patients, a home sleep apnea test is available as a convenient alternative to in-lab studies. HSAT allows patients to be monitored in their usual sleep environment while collecting essential data to diagnose obstructive sleep apnea.

Multiple Sleep Latency Test (MSLT)

The MSLT is used to evaluate excessive daytime sleepiness and diagnose narcolepsy. This test measures how quickly a person falls asleep in a quiet environment during the day and assesses REM sleep onset.

Actigraphy

Actigraphy involves wearing a wrist device that tracks movement to help evaluate sleep-wake cycles and circadian rhythm disorders over extended periods.

Treatment Options and Therapies

Swedish Sleep Medicine Issaquah offers a broad range of evidence-based treatments designed to improve sleep quality and address the underlying causes of sleep disorders. Treatment plans are individualized based on diagnostic findings and patient needs.

Continuous Positive Airway Pressure (CPAP) Therapy

CPAP remains the gold standard for treating obstructive sleep apnea. The center provides CPAP titration studies to optimize machine settings and offers patient education and support to maximize treatment adherence and effectiveness.

Oral Appliances

For patients who cannot tolerate CPAP, custom-fitted oral appliances are available. These devices help maintain an open airway during sleep by repositioning the jaw.

Cognitive Behavioral Therapy for Insomnia (CBT-I)

Behavioral interventions such as CBT-I are a key component of insomnia treatment at the center. This therapy focuses on changing sleep habits and addressing underlying psychological factors to promote sustained sleep improvement.

Medications and Supplementation

When appropriate, pharmacologic treatments may be prescribed to manage specific sleep disorders. The center emphasizes safe medication use combined with lifestyle modifications.

Lifestyle and Sleep Hygiene Counseling

Education on proper sleep hygiene and lifestyle changes is an integral part of treatment. Patients receive guidance on factors such as diet, exercise, screen time, and stress management to support healthy sleep patterns.

Patient Experience and Support

Swedish Sleep Medicine Issaquah prioritizes a patient-centered approach, ensuring comfort, education, and ongoing support throughout the diagnostic

and treatment process. The staff works closely with patients to address concerns and optimize outcomes.

Comprehensive Patient Education

Patients receive detailed information about their sleep disorder, treatment options, and expected outcomes. Educational resources help empower individuals to actively participate in their care.

Follow-Up and Monitoring

Regular follow-up appointments allow the care team to monitor treatment effectiveness, make necessary adjustments, and address any emerging issues. Remote monitoring technologies may also be utilized for convenience.

Multidisciplinary Collaboration

The center collaborates with primary care providers, mental health professionals, and other specialists to provide integrated care, recognizing the complex interplay between sleep and overall health.

Support Services

- Sleep disorder support groups
- Access to counseling and behavioral therapy
- Assistance with insurance and treatment financing
- Patient advocacy and navigation services
